## Compound BV90

### Fluorocarbon (FPM, FKM, VITON<sup>1</sup>)

#### Material Description

Fluorocarbon is a well-known high-performance rubber that has excellent resistance to high temperature, ozone, weather, oxygen, mineral oil, fuels, hydraulic fluids, aromatics and many organic solvents and chemicals.

#### Fluorine Content

Viton® variations include: general type (A: 66% fluorine), middle fluorine content type (B, GBL: 67 to 68.5% fluorine), high fluorine content type (F, GF: 70% fluorine), improving low temperature flexibility type (GLT, GFLT) and excellent resistance to more chemicals and solvents (Viton® ETP Extreme). We also can supply excellent acid and alkali resistance parts made by VITON® TBR.

#### Cure system: Bisphenol-cured

Standard FKM compounds are Bisphenol-cured. FKM compounds with peroxide-cured possess better acid solution resistance than the bisphenol-cured and can replace litharge-cured applied in acid solutions. In some lubricants, adding a few organic amide or amine, or choosing peroxide-cured system Viton® will be better than bisphenol curing systems.

#### Other Common Variations

- FKM can also be submitted for approval to Underwriters Laboratories (UL) for use in applications as prescribed in UL157.
- FKM has excellent resistance to high temperature, oil, solvent, flame, chemical and weather, and is usually applied in automotive, chemical processing, aerospace and many other industries.
- Viton® GLT is broadly used in thermal range of -40°C to 250°C (-40°F to 482°F) and has outstanding resistance to aggressive HTS-type oils which are commonly used in aerospace industries.
- Viton® ETP is usually applied in chemical industries.
- In some fuels, adding several methanols, Viton® F and B-type are more usable than A-type, especially F-type. If it requires lower temperature, GFLT and GBLT will be available.
- Viton® TBR 605C (TFE/propylene polymer) is better base and steam resistant than other general Viton®. It can be used in amine, amide and some bases.

GENERAL INFORMATION	
ASTM D1418 Designation	FKM
ISO/DIN 1629 Designation	FKM
ASTM D2000/ SAE J 200 Codes	HK
Standard Colors	Black
Hardness Range	50 to 90 Shore A
Relative Cost	High

SERVICE TEMPERATURES	
Standard Low Temperature	-26°C (-15°F)
Standard High Temperature	232°C (450°F)
Special Compound Low Temperature	-40°C (-40°F)
Special Compound High Temperature	275°C (525°F)

#### PERFORMS WELL IN:

- Petroleum products
- Fuel or blend with methanol or ethanol
- Diesel or blend with biodiesel
- Mineral oil and grease
- Silicone oil and grease
- High vacuum
- Ozone, weather and very high temperature air
- Strong acid

#### DOESN'T PERFORM WELL IN:

- Ketones
- Low molecular weight organic acids (formic and acetic acids)
- Superheat steam
- Low molecular weight esters and ethers
- Phosphate ester based hydraulic fluids-Skydrol®

<sup>1</sup> Viton is a registered trademark of Dupont Dow Elastomers.
